

Activity Material For Poultry

SUPPLEMENTARY FEED

Version: UK01

## PICKBLOCK MEDIUM

### For broilers

The hardness of PICKBLOCK MEDIUM is adapted to a slightly lower pecking frequency and intensity and is therefore particularly suitable for broilers.

### Ingredients:

Crude protein	5.4%	Lysine	0.2%
Crude fibre	2.3%	Methionine	0.1%
Crude fat	1.5%	Calcium	11.5%
Crude ash	30.8%	Phosphorus	0.2%
		Sodium	0.03%

### Composition:

Rye, calcium carbonate (limestone and mussel meal), dextrose, maize, wheat, oat bran, wheat gluten, molasses, alfalfa

### Benefits:

- Ensures an optimal, sustainable activity for poultry
- Enables natural behaviour during feed intake and search
- Promotes mobility and activity
- Supplies additional valuable minerals
- Supports the natural wear of the beak and helps reduce feather-pecking

PICKBLOCK MEDIUM fulfils current recommendations for animal welfare in poultry farming.

### Recommended feeding:

PICKBLOCK MEDIUM is an activity material for poultry in addition to their daily feed ration. For broilers: 1 block per 150m<sup>2</sup> of shed area. The feed intake is up to 3g per bird per day. Due to the natural components, PICKBLOCK MEDIUM should be protected from moisture by offering it on a waterproof base rather than placing it directly on the ground.

- 1 block = 5 kg (supplied as 20kg cardboard carton containing four 5kg pickblocks)
