

SUPPLEMENTARY FEED

Version: UK01

## PICKBLOCK LONGLIFE

### For poultry rearing, laying hens and turkeys

The hardness of the PICKBLOCK LONGLIFE is adapted to the relatively high pecking frequency and intensity of poultry in rear, laying hens and turkeys.

#### Ingredients:

Crude protein	5.4%	Lysine	0.2%
Crude fibre	2.30%	Methionine	0.1%
Crude fat	1.5%	Calcium	11.5%
Crude ash	30.80%	Phosphorus	0.20%
		Sodium	0.03%

#### Composition:

Rye, calcium carbonate (limestone and mussel meal), dextrose, maize, wheat, oat bran, wheat gluten, molasses, alfalfa

#### Benefits:

- Ensures an optimal, sustainable activity for poultry
- Enables natural behaviour during feed intake and search
- Promotes mobility and activity
- Supplies additional valuable minerals
- Supports the natural wear of the beak and helps reduce feather-pecking

PICKBLOCK LONGLIFE fulfils current recommendations for animal welfare in poultry farming.

PICKBLOCK LONGLIFE is an activity material for poultry in addition to their daily feed ration. PICKBLOCK LONGLIFE can be provided in the scratching area or shed.

#### Recommended feeding:

Poultry in rear and laying hens: 1 block per 600-1,000 birds. Turkeys: 1 block per 400 m<sup>2</sup> of shed area. The feed intake is up to 2g per bird per day. Due to the natural components, PICKBLOCK LONGLIFE should be protected from moisture by offering it on a waterproof base rather than placing it directly on the ground.

- 1 block = 5 kg (supplied as 20kg cardboard carton containing four 5kg pickblocks)
